The nervous system is the most complex of all the body's systems. It is a detailed network of sensory cells, originating in the brain and spinal cord that transmits signals—the body. It uses a caravan of chemical messengers to make sense of this marvelous complex that we—as touch, taste, smell, hearing, and vision. In fact, at this precise moment, an extraordinary relationship between our eyes and our brain, we are able to see and understand what we are reading. Modern cameras—on the same basic principles as our eye, they have never been able to equal the visual power of the eye. The focus and the automatic aperture of the human eye are perfect.

Consumers purchase products and services to experience certain emotional states or achieve emotional goals in a process called emotional arousal. Emotions can create a feeling of pleasure or satisfaction, but they can also give the consumer the perception that their purchase will help them avoid a feeling of displeasure. No matter what the purchase is, consumers must somehow associate a positive emotional connection between a product and themselves. Positive emotions can include the fulfillment of a desire or the feelings of safety and protection.

Consumers also have both unexpressed and expressed emotions. It is important to understand the difference between these emotions because if a consumer is purchasing but is not expressing any emotion toward a product, you may need to ask more questions in order to reach the customer on a deeper level. Doing so helps the consumers feel that they are somehow linked to your product and that it produces a favorable image of them. This reaction evokes consumer identification with your product and motivates them to buy – and keep buying – your product.

29. How does buying something affect consumers’ emotions?
   A) It gives consumers a feeling of achievement.
   B) It causes consumers to have damaging thoughts.
   C) It influences every decision consumers make before purchasing.
   D) It leads to a condition of discomfort and misery.
   E) It results in a feeling of regret for purchasing too much.

30. It is important to comprehend the difference between unexpressed and expressed emotions because ----.
   A) emotions are important in understanding why consumers buy certain products
   B) these expressions are evidence of how consumers can reach emotional goals
   C) when consumers identify themselves with a particular product, they keep buying it
   D) consumers need to get rid of any uncomfortable and unsafe feelings
   E) consumers make decisions based on perceptions rather than reality

31. Which of the following could be the main idea of this passage?
   A) It is important to evaluate the emotional needs of customers.
   B) Consumers satisfy all of their needs by purchasing products.
   C) The motivational process begins with the need for a certain product.
   D) Consumers are triggered by some specific emotions when buying a product.
   E) It is unclear whether emotions truly have an impact on consumer behaviour.
A new helmet display promises to give bikers eyes in the back of their heads. The designer of the equipment states that the inherent problem with motorcycles is that the mirrors reflect a very small image and, because of the position of the mirrors, motorcyclists mostly just see their elbows. A small backlit display screen is added onto motorcycle helmets with an adjustable arm which lets riders place it just below or above their eye, in their peripheral vision. A rear-facing camera attached to the back of the bike streams live video via Wi-Fi to the helmet-mounted receiver. The images are processed and stabilised before they reach the display to accommodate for the bike’s movements. One glance at the display gives the rider a wide view of the road behind them. Although the screen is just next to the user’s face, optics fool the eye into focusing at a more comfortable distance of around 3 metres. However, it is still suggested that users should check their mirrors and do the lifesaver check, turning their heads to check blind spots.

32. What is the problem regarding the motorcyclists’ vision?
A) It is difficult for bikers to get a broad view of the road behind them using only their mirrors.
B) Fatal accidents cannot be prevented because of the limited use of mirrors.
C) Motorcyclists have difficulty adjusting mirrors to get images from the sides of the bike.
D) The body’s position on the motorcycle does not allow the biker to see what is happening around him.
E) Mirror positions constantly need to be changed to follow traffic flow.

33. It is understood from the passage that the helmet display ----.
A) records the motorcycle’s movements
B) is placed directly below or above the mirror on the front of the bike
C) views peripheral images and movements, though there is a delay in transmission
D) shows images of what is happening behind the motorcycle
E) fools motorcyclists’ eyes into thinking things are more than 3 metres behind them

34. Which of the following could be the best title for the passage?
A) New Helmet Technology for Rear Vision
B) Helmet Displays Replace Mirrors
C) Image Processing through Helmet Displays
D) Mirrors versus Helmet Displays
E) Lifesaver Check of a Motorcyclist
Today’s symphony orchestra has its roots in 17th century bands. The earliest orchestras, usually attached to a church, or a theatre, varied in structure from place to place. They were often directed from the keyboard or by the principal violinist. During the 18th century, as popular works such as those by Haydn and Mozart began to be played all over Europe, some standardization of the orchestra became necessary. A string section comprising violins, violas, cellos, and double basses was usually joined by two horns, two flutes, two trumpets, and timpani. The clarinet became a standard member of the orchestra only at the end of the 18th century. The 19th century saw the rise of public concerts in large halls, which necessitated louder instruments and larger orchestras. As a result, instruments changed. They were redesigned and adapted to enable them to project further. Larger and smaller versions of some instruments, such as the piccolo, cor anglais, and bass clarinet, were featured more frequently. Some new instruments were also added, with trombones and later, tubas becoming standard members of the orchestra.

35. According to the passage, the first orchestras ----.
A) did not all have a consistent structure
B) were able to perform only in churches and theatres
C) had almost the same structural system with each other
D) used the same instruments as modern orchestras do today
E) reached their audiences with louder instruments in larger halls

36. It is pointed out in the passage that orchestras in the 19th century ----.
A) changed a lot due to the different religious and cultural demands of the leaders at that time
B) were only led by keyboards and principal violinists
C) required more members and instruments modified to project sound further
D) wanted to redesign their instruments so as to use them in small churches and theatres
E) added trombones and tubas because the variety of instruments in orchestras was limited

37. What is the main purpose of the passage?
A) To show how orchestras have changed over the years in terms of their structure and instruments
B) To inform readers about the differences between the 17th and 19th century orchestras
C) To explain how classical music got to be so popular in today’s modern world
D) To inspire and encourage people to start listening to classical music
E) To give examples of the types of instruments which were changed or modified after the 19th century
For centuries, the world’s physicists, writers and philosophers have argued about whether time travel is possible, with most coming to the conclusion that it is never going to happen. But on a large plot of land just outside the small town of Comfort, Texas, a group of architects, engineers and scientists are building a ‘Timeship’ that they say it could transport tens of thousands of individuals to a far-distant future. Their approach does not involve the use of flux capacitors, or zooming at light-speed through black holes. Instead, the Timeship aims to store people at such low temperatures that their bodies are preserved for a future civilisation to reanimate them, a concept known as cryonics. “Just as a spaceship allows people to move through space, our Timeship will allow people to travel to another time in the future,” explains Stephen Valentine, who is the director and principal architect of the Timeship project.

38. According to the group of architects, engineers and scientists in Texas, ----.
A) the city is not really suitable for the ‘Timeship’ because it is such a small place
B) it will soon be possible to transport more than 10,000 people to a far-distant future
C) it is possible that the bodies of people are preserved with almost no changes
D) their ‘Timeship’ will have the capacity of at most 10,000 people
E) time travel is not likely to take place until a far-distant future

39. According to the passage, the Timeship ----.
A) is designed using the latest technology in order to reach light-speed efficiently while travelling through time
B) will be able to travel through space, but will avoid black holes through the use of the most modern technology available
C) is constructed in much the same way as a spaceship, but rather than travelling through space it will simply be used to freeze people
D) will not really move, but rather will show passengers a simulation of what the far-distant future might look like
E) will house people who have been frozen until some time in the future, thus having time-travelled

40. Which of the following could be the best title for the passage?
A) Why Is Time Travel Essential?
B) A Different Way to Travel Through Time
C) Faster than a Spaceship
D) How to Create a Timeship
E) Travelling to Space
It was a road that kicked off the pattern of destruction in the Amazon forest. During the 1970s, Brazil began building the Trans-Amazonian Highway from near the country’s easternmost point to its western border, where the state of Amazonas meets Peru. The route opened up the heart of the Amazon to settlement, causing deforestation rates to increase. During the 1990s and early 2000s, more than 25,000 square kilometres of rainforest per year were cleared out. Throughout these years, roads have provided the means to penetrate the forest and eliminate large chunks of it. In an unpublished study of the Brazilian Amazon, researcher Christopher Barber found that 95% of deforestation in the region occurs within 7 kilometres of a road. Once construction begins, road crews are quickly followed by land speculators, loggers, farmers, ranchers, gold miners and others who carve away the forest along the route. This creates great treeless expanses in the landscape, but research is now showing that the building of roads also triggers environmental changes in the remaining forest that can dry out trees, set the stage for wildfires, and weaken the ecosystem.

41. Which of the following can be said about the Amazon forest?
A) The state of Brazil had to build roads through it for the people who were settled in the forest.
B) Although it damaged the forest, the new highway enabled the people of Amazonas to better travel to Peru.
C) From the 1990s onwards, 25,000 square kilometres were being cut down every year to make way for the new highway.
D) The rainforest has been suffering from a pattern of destruction in a scale it had not experienced before the 1970s.
E) Deforestation has not only affected Brazil’s eastern and western borders, but it has also started to spread through other countries.

42. Which of the following best describes the relationship between road construction and deforestation?
A) Since the road crews work with a lot of parties to carve away the forest, deforestation along the route is not affected at all.
B) According to research on the Brazilian Amazon, a very large percentage of deforestation is a direct consequence of building the Trans-Amazonian Highway.
C) The highway and its branching roads were built to provide the necessary means of penetrating the forest to erase the traces of deforestation.
D) Contrary to previous beliefs, research is now showing that road crews also set fires and dry out the trees during construction work.
E) Although trees were cut down for the highway resulting in treeless landscapes, this was limited to an area of within 7 kilometres of a road.

43. One can conclude from the passage that the author mainly ----.
A) wants to warn the Brazilian state against the future consequences of their project of Trans-Amazonian Highway
B) tries to point that the environmental effects of building roads are confused with the ones caused by humans
C) informs the reader on the effects building a road through the forest has on the local ecosystem
D) criticises people contributing to the deforestation process with their work
E) underlines the reasons why the Brazilian Amazon suffers more than the other parts of the forest
